35 new dragonfly species identified in Mah

- One of the two researchers is from Nagpur
- The species are considered as ecological indicators and bio-controlling agents

■ Special Correspondent

A STUDY conducted by undertaking surveys across Maharashtra for eight long years has identified 35 new Odonata species, especially dragonflies popularly known as 'helicopters', which are now added in the list of earlier reported 99 species of Odonata from Maharashtra State, taking the total of the species to 134.

Dr Ashish Tiple from Nagpur, who is Head, Department of Zoology, Vidyabharti College, Seha in Wardha district, and Pankaj Koparde from Pune, who is doing PhD at Division of Conservation Biology, Salim Ali Centre for Ornithology and Natural History, Coimbatore, jointly conducted research and found these 34 additional species of

Odonata of Western Ghats, Western Maharashtra, Vidarbha, Khandesh and North Maharashtra.

A research paper in this regard has been recently published by Oxford University Press on behalf of Entomological Society of America in Journal of Insect Science.

Both Dr Tiple and Koparde conducted surveys at different rivers, tanks, lakes and forest areas situated in Maharashtra. The painstaking efforts put in by both the researchers bore a fruit in the form of finding 35 new Odonata species. During the study, they also came

across certain local species.

Dragonfly and Damselfly are included in the Odonata order. Both these species actively help in controlling mosquito-borne diseases such as Malaria, Filaria and Dengue. They eat mosquitoes and small insects and called as bio-controlling agents in nature due to their utility. They are susceptible to habitat and in case of change in it their number is affected. Therefore, they are also known as ecological indicator. Dr Tiple and Koparde also stated which species were found where and why.

Favourable habitat is available for dragonfly and damselfly because of geographical status and climatic conditions. The researchers feel that some more species of Odonata and their habitats could be found at the places not covered by them.

During their survey, Dr Tiple and Koparde observed that the forest in Tadoba Andhari, Prochund Bar Tiger Reserves is not essentially a domain for tigers only but also very important habitat for Odonata. Out of the 134 species, as many as 84 are found in Vidarbha alone.

Talking to 'The Hitavada' on Tuesday, Dr Tiple expressed concern that the species face danger of increasing water pollution. The life cycle of Dragonfly and Damselfly mainly depends on water and hence they are respective to danger of water pollution.

Both the researchers used Dragonfly India facebook for getting information on distribution of Odonata in various parts of Maharashtra and this social networking site helped in exchanging pictures and views, Dr Tiple pointed out.

How do you define the work of butterfly?
 Dr Ashish Tiple takes a playful approach to this question. "It's a very simple work," he says. "You know, he says with a smile of contentment, "the work of butterflies is an extension of creating ecosystem, and vice versa."

They are a symbol of happiness. In your life, butterflies are not happy, they are good pollution, part of a food chain. I show a sense of satisfaction studying them being with them in their world."

"We are seeing the real discovery is a subject that the young researcher will be work. And disciplines and their concepts, the disciplines, that are indicators of the healthy scientific ecosystem. They are the great research interests, he adds.

"The one has to see the future. Butterfly wings undergo a change with every season, Tiple reveals from his study. "Flexibility is the key factor in butterfly behavior," he explains, pointing to the blue and black stripes of the butterfly.

Body of work

As a Zoology B.T. training and an assistant professor and head of Zoology Department at the Vidyabharti College of Science at Pune in India, Tiple is deeply an authority on his subject in the region and well beyond to become a name in India. He completes every day from the city to his village and every so often, escapes into the beauty of his village, parks, jungles, or forests. "I read, write, think, and, he has published about five research books over 15 years from national research papers, and manuscripts in the international publications, as a real life

Observation of butterflies is an indication of a healthy ecosystem, says Tiple, who has a fascinating body of research work of global importance. "We have in our area of Nagpur an abundance of species, but the population of butterflies," he says, "is in a low state, when you find dense population of butterflies in one place." Nagpur city, he says, is no exception. "You find nearly 90 species in this city, but lower numbers of each species."

Of the 330 odd species that one may expect to find in central India, Nagpur district has reported 140 butterflies - or nearly 40 per cent of the species, Tiple says. "Under an amazing fauna there."

Childhood connection

There is a childhood connection with butterflies, Tiple says, he would recall and study them growing up in his native village of Nagpur near Warora in Chandrapur district.

But the real work while doing his M.Sc. in Zoology from Arizona University. "My grand old man to give butterflies for my house and I did it," he says. "No one was studying butterflies as I picked it up for my research." He follows PhD from the ITM Nagpur University working on butterfly research. He went to a leading butterfly research center in London and the latter offered him. There was no lack of work.

Today, Tiple is a guest to the distinct researchers of Nagpur's diversity and dream of building a robust research organization in the region. "We are coming to a butterfly research center," he says. "It's a tertiary care is like a platform for the ecosystem to study."

of the South Asian Invertebrate Specialist Group, Tiple says his field of biology has implications for the study of evolutionary relationships and behavioral patterns. His research history includes studies on

Rare Indian egg-eater snake gets rarer due to several road kills

Mumbai, Feb 11 (Hindustan Times Group)

Nagpur: Over 40 rare Indian egg-eater snakes, which is listed under Schedule 1 of the Wildlife Protection Act (1972) and declared as 'Least Concern' species by International Union for Conservation of Nature (IUCN), have been reported in the road-kills of Maharashtra, most of which are of Maharashtra. Shockingly, around 40 snakes of the species were found dead in road kills.

The egg-eater snake was believed to have gone extinct until 2003 when city-based herpetologist Parag Dhanraj rediscovered it in the region after 100 years. In 2008, Dhanraj (left) along with researcher Ashish Tippe (right) started working on a research to study the population distribution, the drug behavior, threats and implications for conservation of the species in Central India. Their research has now been published in the *Journal of Herpetology*.

"Indian egg-eater is widely distributed in the state. But we recorded maximum number of specimens in the region," said Tippe. He added that the species was also reported in Telangana. Out of 40 specimens that

were observed in different areas of Maharashtra and Telangana, 40 were found to be road kills. "Being a nocturnal species, it frequently gets crushed under heavy vehicles while crossing the road," said Dhanraj. While surveys

conducted by illegal brick kilns and urbanisation, "Waste lands, which are the main habitat of Indian egg-eater snakes, are being utilized for commercial, industrial and agricultural uses, thereby illegal brick kilns have also come up at those places," said the researchers.

An 800 km research, the species is common and feeds on bird eggs. "They have very specific feeding habits and eat only poisonous bird eggs. Their activity is very specific to specific seasons. The overall activity of these snakes depends on breeding seasons of small-sized bird species," said Dhanraj. He added that when birds change their habitats due to disturbance caused by humans, the habitat of Indian egg-eater also gets threatened.

Seeing the species's importance in maintaining biological balance, the researchers have demanded to declare it as the state snake. "It is a flagship species which plays an important role in controlling bird population. The forest department should take its conservation seriously, identify and generate snake-charmers and protecting them to a great extent," they said.

Most of the butterflies recorded belong to the Nymphalidae (43 species) with four new records. Of Lycaenidae, there are 41 species with 12 new records. In Pieridae, 19 species with three new records were found. A

total of 20 Hesperidae species with six new records were found while from the Papilionidae 10 species were recorded with two new records.

"One species recorded from the family Riodinidae. Twelve of the recorded species are protected under Indian Wildlife Protection Act 1972. The study provided an updated list of butterflies of Tadoba National Park.

Dr Tiple said, "There is a need to study species not commonly seen. Butterflies are important for pollination because they visit different flowers to drink nectar. They are an important part of the

environment. Small changes in the environment are sensed by these insects and are directly affected by habitat, ambient temperature and climate change. An abundance of butterflies is a sign of a good environment."

Tiple further said the survey was conducted near lakes, rivers and nearby areas. Most of the time the butterflies were identified immediately on the spot. For this, observation and photography were carried out every fortnight in the reserve and surrounding areas. Butterflies were classified into species based on how often they were seen.

नागपूर, सा. २ / ताडोबा-अंधारी व्याघ्र प्रकल्प कायदा अन्वये फुलपाखरांसाठी देशीय शोधकांमळे जमात आहे. या वर्षीच्या अभ्यासात आणखिल नुकताच तयार केलेल्या अहवालात या प्रकल्पात सहा कुळातील फुलपाखरांच्या १३४ प्रजाती आढळल्या आहेत. त्यात नवीन २७ प्रजातींचा समावेश झाला आहे.

ताडोबा व्याघ्र प्रकल्पात २००८-२०१० दरम्यान पहिले सर्वेक्षण सेलु येथील डॉ. अर. जी. शीखर वडा, कविनाथ व विद्यान महाविद्यालयातील प्रत्येकीय विद्यार्थ्यांचे प्रमुख डॉ. अश्विनी टिपले यांचे केले होते. त्यात फुलपाखरांच्या १११ प्रजातींची नोंद झाली होती. २०१०-२०११ दरम्यान विद्यानवारी महाविद्यालयातील प्रत्येकीय

हे सर्वेक्षण तलाव, नद्या आणि आमपासच्या भागातून केले गेले. बहुतेक वेळा फुलपाखरांची ओळख जहाजेवरून लगेच केली जात असे. यासाठी ताडोबा व्याघ्र प्रकल्प आणि आमपासच्या क्षेत्रात वेळ मिळेल तसे निरीक्षण आणि दर पंधरा दिवसांनी छायाचित्रण केले गेले. फुलपाखरे किती वेळा दिसली त्यानुसार त्यांच्या प्रजातीचे वर्गीकरण करण्यात आले.

अव्यासात असे दिसून आले आहे की बागा, वृक्षांरोपण केलेली ठिकाणे आणि कुरणे या सारख्या ज्या ठिकाणी वाणसत्पा जावर आहे, अशा ठिकाणी फुलपाखरे पार कमी आढळली.

विद्यानचे प्रमुख डॉ. अश्विनी टिपले आणि विद्यान वन्यजीव संरक्षण भंगका यांनी संशोधन केले. त्यांचा शोधनिबंध अंतरराष्ट्रीय वर्न अफिशियल बयोडायव्हर्सिटी अँड सिस्टेमॅटिक्समध्ये प्रकाशित झाला आहे.

भंगका म्हणजे, ताडोबा राष्ट्रीय उद्यानाच्या नोंदीत २७ नवीन प्रजातींची

७० प्रजाती असून आता फुलपाखरांच्या एकूण १३४ प्रजाती झाल्या आहेत. अभ्यासात आढळलेल्या एकूण ९० प्रजाती सद्य आढळल्या-ना होणा. ३४ प्रजाती सामान्य होणा, नव सातत्या आढळल्या-ना, ११ दुर्लभ आणि १२ अव्यंत दुर्लभ होणा. या नोंदीमध्ये एकूण १२ प्रजाती भारतीय

वन्यजीव संरक्षण कायदा १९७२ अन्वये संरक्षित आहेत. सिव्हीटिव्हे कुळातील ४३ प्रजाती या अभ्यासात आढळल्या. त्यापैकी चार प्रजातीची ताडोब्यात पहिल्यांदाच नोंद झाली आहेत. सिव्हीटिव्हे कुळातील ४९ पैकी १२ प्रजाती नवीन आहेत. पायरीची कुळातील १९ पैकी सहा प्रजाती पहिल्यांदाच नोंदील्या गेल्या आहेत. सिव्हीटिव्हे कुळातील २० प्रजातींची सहा प्रजाती पहिल्यांदा नोंदील्या आहेत. पॅपिलिऑनिटो कुळातील १० पैकी दोन प्रजाती नवीन आढळल्या आहेत. एक प्रजाती प्रिओडोनिटो कुळातील आहे. टिपले यांनी सांगितले की, 'सहा शोधकांच्या जल नमूनेल्या प्रजातींचा अभ्यास कायद्याची गरज आहे. फुलपाखरे पर्यावरणासाठी महत्त्वाची असतात. कारण ती मकंद टिपल्यासाठी केंद्रबिंदूच्या फुलात पेर देतात.

Sub: Assistance for Dragonfly Bio-monitoring Project in Naggur

WWF India is celebrating the fourth edition of the Dragonfly Festival in partnership with NBA, BNHS, UNEP, ZSI, Dragonfly South Asia Society, Indian Dragonfly Society, SCS, MIT-WPU University and India Biodiversity Portal.

This year we are conducting Wetland monitoring surveys on Dragonflies as a part of our citizen science activation at various wetlands across India. These Dragonfly surveys will be facilitated by youth and volunteers and help provide researchers with insights into the health and diversity of the dragonflies and damselflies of the wetland. This project is being overlooked by Dr. R. A. Subramanian, Zoologist, Survey of India, formerly.

We are pleased to have you as our Local expert for the Odonata wetland monitoring of Futala Lake, Naggur. The details of this citizen science survey are as follows:

1. Conduct On-ground Visits to the wetland for 3 months (Oct - December); 3-4 surveys will be conducted per month.
2. Conduct Habitat and Odonata surveys as per the protocol i.e. lining a suitable transect and guiding volunteers in field methods.
3. We will require your expertise in guiding the volunteers in conducting their surveys especially in identification.

Looking forward to working with you.
Thanking you
