(57) Abstract :

Image recognition along with artificial intelligence for accurate prediction of lung cancer using various medical modalities is the proposed invention. The invention focuses on designing a framework of artificial intelligence, that analyses the images that are captured using various screening medical modalities. The image recognition technique scrutinizes the images and feeds the selected images to train the artificial intelligence module.

(57) Abstract:
 INTEGRATING MACHINE LEARNING TECHNIQUES ALONG WIRELESS SENSOR NETWORKS FOR PRECISION IN AGRICULTURE. One of the most promising technologies for some real-time applications because of its size, cost-effectiveness, and easily deployable nature. Agriculture is the most important role played in the survival of human civilization. The technological advancement in wireless communication and reduction in the size of the sensor is innovatively projected in various fields such as environmental monitoring, precision farming, health care, military, and smart home. Motes used in agriculture and challenges involved in the deployment of a wireless sensor network. Smart farming has played a major role to enhance production in the field of agriculture. The natural irrigation system is under pressure due to the growing water shortages, which are mainly caused by population growth and climate change. The change in climate affects crop production significantly, and the prediction of good harvests before harvesting. Enables the farmers as well as the government officials to take appropriate measures for the marketing and storage of crops.
